Heat Inductor with Accessories

Uses induction technology to create flameless heat. This accurately concentrates the heat into the area you are working on, only heating the metal or treated plastics with the advantage of not having dangerous naked flames in the workshop.

The key benefit of this is that it minimises the risk of collateral damage and reduces 'cool off' periods saving the workshop time and money. It is an invaluable tool for working with easily damaged components such as body trim and windscreen surrounds.

- The magnetic field passes through non-metals such as glass and trim and heats the metal underneath.
- Can heat a 3/4" nut in less than 15 seconds.
- Has an ergonomically designed 'pistol grip' handle for ease of use.
- Supplied with one of each 22mm coil/19mm coil/universal rope coil.
